4. Set-Up	6
5. Editor	7
6. API	8
7. Known Limitations	9
8. Support and feedback	10

1. Get started quickly

To get started you can check out the demo scene in 'Assets/DTT/Area of Effect Regions/Assets/Scenes/Demo'. Here you can see all the implementations of the different regions we support.

To use this on one of your own GameObjects you can add one of the prefabs in the 'Assets/DTT/Area of Effect Regions/Assets/Prefabs' folder in your scene.

Circle region

For the circle region you can make use of a radius to set the size of your circle, and an offset to move it relative from the GameObject.

Line region

The line region makes use of an angle so you can direct which way it should point, a length for how far it should reach out from the GameObject it's on, and a width for setting the thickness of the line region.

Arc region

To set up the arc region you have the option to set the arc in angles, you can adjust the angle to make it point in the direction you want it to, and you can tweak the radius of the arc.

2. Introduction

Area of Effect Regions is an asset to help you define easier regions in your game/application. A common use case for this asset is to use it as indicators when you want to telegraph an attack or skill to your user in an MMO game. It's designed to be extendable by your own implementation so you can customize it as much as you see fit. It also contains an example implementation for every region we offer, so you can immediately see how it can be used.

3. Changelog

1. version 1.0.0 – Initial version
2. version 1.0.1 – Compatibility and stability update
3. version 1.1.0 – Minor property update
 - a. Added
 - i. FillProgress property to ArcRegion
 - ii. FillProgress property to CircleRegion
 - iii. FillProgress property to ScatterLineRegion
 - iv. Length property to ScatterLineRegion
 - v. Width property to ScatterLineRegion
 - vi. Arc property to ScatterLineRegion

4. Set-Up

To set up any of the region components you can easily add them to your script using the “Add Component” menu.

1. Inspect your desired **GameObject** and open the “Add Component” menu.
2. In the menu search for the region script you wish to add.
3. Voila! You’ve now successfully added a region component.

5. API

```
// Can adjust the angle, length and width of the LineRegion.
_lineRegion.Angle = 30.0f;
_lineRegion.Length = 5.0f;
_lineRegion.Width = 0.5f;

// Can request specific properties of the LineRegion.
Vector3 endPosition = _lineRegion.EndPosition;
Vector3 widthOffset = _lineRegion.WidthOffset;
Vector3 leftHandSideStart = _lineRegion.LeftHandSideStart;
Vector3 leftHandSideEnd = _lineRegion.LeftHandSideEnd;
Vector3 rightHandSideStart = _lineRegion.RightHandSideStart;
Vector3 rightHandSideEnd = _lineRegion.RightHandSideEnd;
```

```
// Can adjust the angle, arc and radius of the ArcRegion
_arcRegion.Angle = 60.0f;
_arcRegion.Arc = 15.0f;
_arcRegion.Radius = 2.5f;

// Can request specific properties of the ArcRegion.
float leftAngle = _arcRegion.LeftAngle;
float rightAngle = _arcRegion.RightAngle;
Vector3 leftEndPosition = _arcRegion.LeftEndPosition;
Vector3 rightEndPosition = _arcRegion.RightEndPosition;
```

```
// Can adjust the offset and radius of the CircleRegion.
_circleRegion.Offset = new Vector2(10.0f, 5.0f);
_circleRegion.Radius = 3.5f;
```

6. Known Limitations

1. The regions are designed to only use rotation on the y-axis, z and x rotations are not inherently supported.

7. Support and feedback

If you have any questions regarding the use of this asset, we are happy to help you out.

Always feel free to contact us at:

unity-support@d-tt.nl

(We typically respond within 1-2 business days)

We are actively developing this asset, with many future updates and extensions already planned. We are eager to include feedback from our users in future updates, be they 'quality of life' improvements, new features, bug fixes or anything else that can help you improve your experience with this asset. You can reach us at the email above.

Reviews and ratings are very much appreciated as they help us raise awareness and to improve our assets.

DTT stands for Doing Things Together

DTT is an app, web and game development agency based in the centre of Amsterdam. Established in 2010, DTT has over a decade of experience in mobile, game, and web based technology.

Our game department primarily works in Unity where we put significant emphasis on the development of internal packages, allowing us to efficiently reuse code between projects. To support the Unity community, we are publishing a selection of our internal packages on the Asset Store, including this one.

More information about DTT (including our clients, projects and vacancies) can be found here:
